DefenBOARD®

SLIDING BALLISTIC PROTECTION

# A board every day.

# A barrier when it matters.

DefenBOARD serves as a board or another interior feature every day. If a threat arises, it slides across the doorway to form a ballistic barrier.

**FB3 / FB6**

FB7 available on request

panel closing time

Sports hall / everyday use

## Slide. Lock. Protect.

01

### Slide across the doorway

One person can manually slide the panel across the doorway. An electric drive is available as an option.

02

### Automatic locking

The panel locks mechanically in the protective position. The original mechanism is protected by a registered utility model. An audible signal confirms closure.

03

### Release and return

On the manual version, a pull rod releases the locking mechanism so the panel can slide back.

For schools, offices, healthcare facilities and public spaces.

# A solution for your space.

## Dimensions and options

| | |
|---|---|
| Structural opening width | **900-1800 mm**<br>Wider openings: double-leaf configuration. |
| Structural opening height | **1900-2500 mm** |
| Operation | **Manual or motorised**<br>Manual operation by one person; optional electric drive. |
| Locking | **Automatic mechanical locking**<br>Pull-rod release on the manual version. |
| Alternative configuration | **Hinged version on request**<br>Suitability and specifications assessed individually. |

Dimensions refer to the structural opening, not the overall panel size.

## Understanding resistance classes

### FB3

**.357 Magnum**

Revolver ammunition

### FB6

**5.56 × 45 / 7.62 × 51 mm**

Rifle ammunition

### FB7

**7.62 × 51 mm**

Hardened steel core

Available on request.

Classes indicate resistance to penetration by specified ammunition under EN 1522. Bullet construction and test velocity matter as well as calibre.

FB6: resistance verified by the Czech Proof House for Arms and Ammunition under ČSN EN 1522 and 1523; test report no. 75-08030-24.

### Scope of protection

The panel protects the doorway. Protection of adjacent walls and glazing must be addressed separately.

## What we need for your project

For an initial assessment, send us the width and height of the structural opening, photos of the entrance and your requirements for resistance, operation and appearance.

### Installation and handover

We check the sliding clearance and anchoring options, plus the power supply for a motorised version. We design the solution, arrange installation and train the operators. Operating and inspection instructions are provided.

### For existing buildings too

Installation feasibility and any building modifications are confirmed after an on-site assessment.

### An individual quotation

We prepare your quotation according to the opening dimensions, selected operation and installation requirements.

## Let's discuss your project.

No-obligation consultation and proposed solution.
